{multithumb}

This is an optional exercise for those who would like additional practice with some of the basic modeling features that we have studied up to this point. The object to model is a French Cafe style glass. I'm supplying an eDrawings file that you can inspect and measure, as well as a sample rendering above. Don't worry about trying to match exact dimensions; just shoot for the general geometry. Hint: You'll want to use a circular pattern to replicate an Extruded Cut feature.
